SPEAKER GUIDE (11 SLIDES) TOTAL: ~8-9 MINS

Master Delivery & Screen Switch

ONLY 2 WINDOW SWITCHES

1. After Slide 6 (03:45): [ALT+TAB] to Power BI

2. After Live Demo (06:45): [ALT+TAB] to PowerPoint

Time	Window	Key Focus
00:00	Slide 1	Executive Cover & 16.1% Baseline
00:30	Slide 2	Core Project Objectives & 3 Mandates
01:15	Slide 3	Dataset Provenance & PII Compliance
01:50	Slide 4	Power Query ETL (0 Nulls, Pruning, Bins)
02:30	Slide 5	Single Fact Model & Measure Decoupling
03:10	Slide 6	Production DAX Code (DIVIDE & CALCULATE)
03:45	**Power BI**	**LIVE DEMO: Overview ➔ Drivers ➔ Careers**
06:45	Slides 7-8	Rapid 30-Sec Visual & UX Recap Bridge
07:15	Slide 9	4 Root-Cause Vectors (Overtime, Cliff, Pay)
07:50	Slide 10	3-Pillar Action Plan & $2.0M+ ROI
08:45	Slide 11	Pure Thank You & Open Q&A Floor

👉 SWIPE DOWN FOR SLIDE 1

🖥️ POWERPOINT • SLIDE 1 00:00 - 00:30

Slide 1: Executive Title Cover

👉 **ACTION**

Grounded posture, steady eye contact. Deliver the opening lines clearly.

🎙️ **EXACT SCRIPT TO SAY**

"Good morning, members of the leadership committee.

Today, I am presenting our **Executive Attrition Diagnostic and Retention Strategy**.

Across our workforce of **1,470 employees**, our baseline annual turnover rate sits at **16.1%** — representing 237 departures.

Our focus today is diagnosing the empirical drivers of this churn and presenting a data-backed retention roadmap to protect our most valuable talent."

👉 CLICK CLICKER → ADVANCE TO SLIDE 2

🖥️ POWERPOINT • SLIDE 2 00:30 - 01:15

Slide 2: Strategic Project Objectives

👉 **ACTION**

Point to the 3 objective cards: Telemetry, AI Diagnostics, and ROI Strategy.

🎙️ **EXACT SCRIPT TO SAY**

"We established three core project objectives:

First, Baseline Telemetry: Unify enterprise headcount, tenure, and compensation metrics into an auditable baseline, isolating high-risk pockets like Sales at **20.6%**.

Second, AI Diagnostics: Eliminate guesswork by running machine-learning visuals to pinpoint statistical catalysts—specifically workload burnout and early-career cliffs.

Third, Measurable ROI: Translate analytical discoveries into an operational 180-day roadmap designed to save **$2.0M+ in turnover costs**."

👉 CLICK CLICKER → ADVANCE TO SLIDE 3

🖥️ POWERPOINT • SLIDE 3 01:15 - 01:50

Slide 3: Dataset Source & Architecture

👉 **ACTION**
Highlight data privacy and production portability.

🎙️ **EXACT SCRIPT TO SAY**

"Our analysis utilizes the **IBM Watson Workforce Analytics benchmark** dataset, covering 1,470 employee records across 35 attributes.

Because live enterprise HR data is protected under strict GDPR, HIPAA, and employee privacy regulations, IBM modeled this benchmark to reflect true corporate turnover behavior without compliance liabilities.

Our data pipeline is 100% production-ready. Re-pointing this model to live systems like Workday or SAP SuccessFactors requires zero architectural changes."

👉 CLICK CLICKER → ADVANCE TO SLIDE 4

🖥️ POWERPOINT • SLIDE 4 01:50 - 02:30

Slide 4: Data Cleaning & Power Query ETL

> 👉 **ACTION**
> Point to 0 nulls audit, constant pruning, and M-code feature bins.

🎙️ **EXACT SCRIPT TO SAY**

"Inside Power Query, we codified an end-to-end data preparation pipeline.

We audited data hygiene and verified **zero null values** and zero duplicate records across all 1,470 employee profiles.

We pruned three invariant columns—Over18, StandardHours, and EmployeeCount—to eliminate metadata clutter.

Finally, we engineered diagnostic cohorts in M-code: binning employees into structured Tenure brackets, Age cohorts, and Income Quartiles."

👉 CLICK CLICKER → ADVANCE TO SLIDE 5

🖥️ **POWERPOINT • SLIDE 5** 02:30 - 03:10

Slide 5: Data Modeling & Architecture

👉 **ACTION**

Explain the single fact table + measure decoupling.

🎙️ **EXACT SCRIPT TO SAY**

"For our semantic model, we maintained a single consolidated fact table—`employees`—at a strict 1-row-per-employee grain.

At 1,470 records, forcing an artificial Star Schema adds relationship join overhead with zero performance gain.

We decoupled all business logic into an isolated measure container—`_measures`—housing 14 explicit DAX calculations.

This columnar structure leverages Power BI's VertiPaq engine to deliver sub-50ms query response times and zero join ambiguity."

👉 **CLICK CLICKER → ADVANCE TO SLIDE 6**

🖥️ POWERPOINT • SLIDE 6 03:10 - 03:45

Slide 6: Production DAX Code

👉 **ACTION**

Point to the actual code blocks: DIVIDE safe math and CALCULATE context.

🎙️ **EXACT SCRIPT TO SAY**

"Here on screen is our core DAX engine:

We enforced safe division using **DIVIDE**, utilizing the third alternate argument to prevent divide-by-zero crashes on empty slicer subsets.

We engineered dynamic context transitions using **CALCULATE** to compute high-risk cohorts—like overtime attrition—independent of page filters.

And we mapped **tenure_sort** to guarantee chronological chart sorting.

Let us now switch into the live Power BI cockpit to see this telemetry in action."

🚨 **PRESS [ALT + TAB] → SWITCH TO POWER BI**

📊 POWER BI • TAB 1: OVERVIEW 03:45 - 04:45

Live Demo: Overview • Cross-Filtering

👉 **LIVE ACTIONS ON SCREEN**

1. Point to Top KPIs: **1,470 Staff | 237 Exits | 16.1% Rate**
2. Click **Sales** on Department chart → jumps to **20.6%.**
3. Click **Yes** on OverTime slicer → explodes to **30.5%.**

🎙️ **EXACT SCRIPT TO SAY**

"Here on our **Overview** tab, we track our enterprise baseline across 1,470 staff and 237 exits.

When I click on **Sales**, watch our attrition rate jump to **20.6%**.

Now, when we layer on **OverTime: Yes**, the compounding risk is immediate: turnover surges to **30.5%**—nearly triple normal levels.

Next, let us move to our **Drivers** tab to examine what the AI identifies as the root cause."

👉 CLICK TAB AT BOTTOM: **Drivers**

📊 POWER BI • TAB 2: DRIVERS 04:45 - 05:45

Live Demo: Drivers • AI Diagnostics

👉 **LIVE ACTIONS ON SCREEN**

1. Point to Key Influencers (#1 driver).
2. Point to Decomposition Tree (Exits by Dept ➔ Role ➔ Overtime).
3. Highlight Overtime Rate KPI: 30.5%.

🎙️ **EXACT SCRIPT TO SAY**

"On our **Drivers** tab, we leverage Power BI's machine-learning Key Influencers visual.

The AI model confirms that across all 40 variables, **working Overtime is the #1 statistical catalyst**, multiplying departure likelihood by **2.93 times**.

Our **Decomposition Tree** maps where our 237 leavers originate: branching from R&D and Sales straight into high-strain roles like Lab Techs and Sales Reps.

Now, let us examine compensation and tenure on our **Pay & Careers** tab."

👉 **CLICK TAB AT BOTTOM: Pay & Careers**

📊 POWER BI • TAB 3: PAY & CAREERS 05:45 - 06:45

Live Demo: The 2-Year Retention Cliff

👉 **LIVE ACTIONS ON SCREEN**

1. Point to chart: 'Attrition drops sharply after the first two years'.
2. Point to chart: 'Lowest-paid quarter leaves nearly 3x as often'.
3. Note: Promotion timing shows no correlation with departures.

🎙️ **EXACT SCRIPT TO SAY**

"Here on **Pay & Careers**, we uncover two structural turnover patterns:

First, **The 2-Year Retention Cliff**: attrition peaks at **29.8% in years 0 to 2**, but drops in half to **13.8%** once employees stay past 24 months.

Second, compensation quartiles: our lowest-paid quartile leaves at almost **3 times the rate** of top earners.

Early-career burnout and entry pay compression are our true vulnerabilities. Let us now return to our slides to review the executive solution."

🚨 **PRESS [ALT + TAB] → RETURN TO POWERPOINT**

🖥️ POWERPOINT • SLIDES 7 & 8 06:45 - 07:15

Slides 7 & 8: Report & UX Summary

> 👉 **RAPID BRIDGE (30 SECONDS)**
> Since you demonstrated this live in Power BI, advance smoothly through Slides 7 and 8 with this bridging summary.

🎙️ **EXACT SCRIPT TO SAY**

"As demonstrated live across our Overview, Drivers, and Pay & Careers tabs, our visual hierarchy and cross-filtering empower non-technical leaders to drill from company baselines straight into operational root causes.

Now, let us examine the four specific statistical vectors driving our departures."

👉 **CLICK CLICKER → ADVANCE TO SLIDE 9**

🖥️ POWERPOINT • SLIDE 9 07:15 - 07:50

Slide 9: Key Empirical Findings

👉 **ACTION**

Point firmly to the 4 stat cards: 30.5%, 29.8%, 2.8x, and 39.8%.

🎙️ **EXACT SCRIPT TO SAY**

"Our findings confirm turnover is not random—it clusters around four empirical vectors:

1. Overtime Burnout: 30.5% attrition—multiplying exit probability by 2.93 times.

2. The 2-Year Retention Cliff: 43% of departures occur before month 24, peaking at 29.8%.

3. Entry Pay Compression: Bottom quartile earners leave 2.8 times faster than top earners.

4. Role Exposure: Sales Representatives (39.8%) and Lab Technicians (23.9%) experience peak acute churn."

👉 CLICK CLICKER → ADVANCE TO SLIDE 10

🖥️ POWERPOINT • SLIDE 10 07:50 - 08:45

Slide 10: Retention Roadmap & ROI

👉 **ACTION**
Point to Pillar 1, Pillar 2, Pillar 3, then firmly highlight the bottom ROI banner.

🎙️ **EXACT SCRIPT TO SAY**

"We propose a prioritized, 3-pillar intervention roadmap:

Pillar 1 (30 Days) — Cap Mandatory Overtime: Enforce a strict 10-hr weekly cap and shift rotation for Lab Techs and Sales Reps, saving 40 to 45 staff annually.

Pillar 2 (90 Days) — Entry Pay Market Adjustment: Benchmark bottom-quartile pay to the 50th market percentile, eliminating the 3x pay departure penalty.

Pillar 3 (180 Days) — 24-Month Mentorship: Deploy 90-day onboarding and clear 2-year career paths to bridge the 2-Year Retention Cliff.

The Enterprise ROI: Preserving **45 to 60 specialized employees annually** delivers **$2.0M to $2.8M in net replacement cost avoidance**."

👉 CLICK CLICKER → ADVANCE TO SLIDE 11

🖥️ POWERPOINT • SLIDE 11 08:45 - 09:15

Slide 11: Pure Minimal "Thank You"

👉 **ACTION**
Look up at the leadership panel. Smile calmly. Deliver the closing line with executive confidence.

🎙️ **EXACT CLOSING SCRIPT**

"Thank you for your time and leadership.

I am now happy to open the floor to any questions."

Post-Presentation Protocol:
Rest hands calmly, maintain direct eye contact, listen fully before speaking.

🎯 END OF PRESENTATION • CONFIDENCE & MASTERY
